EVO PRO SERIES TRUCK SCALE SUMMING BOX

EVO Industries revolutionizes the truck scale summing box with a new series designed to overcome ALL of the problems with conventional summing boxes currently offered today! This box is the culmination of over 30 years' experience in designing truck scale summing boards and boxes.

- The design reflects the state of the art in terms of molded material, RFI/EMI protection, condensation, and weather protection. In addition, the new design streamlines lead times, simplifies stocking, and cuts dependence on out of control stainless steel pricing and costs!
- Made in USA, the new box uses molded material that has imbedded RFI/EMI shielding and was tested to outperform other materials in extreme temperatures and extremely abusive environments.
- It includes superior sealing for all weather applications-with external screw attachments, a crowned lid and tapered sides (for water run-off in severe weather). The convenient design can be custom drilled off-the-shelf for special requirements.
- Available in 4, 6, 8, and 10 cell configurations in either Excitation or Signal trim versions, the boards have expansion connectors and choice of either Wago lever or screw terminal connections. Lightning protection is optional.
- Heyco™ connectors accommodate cables 0.17" to 0.47" diameter.
